

### Platforms and Applications

use a JobSchema+ package, which enriches job description and postings data, but need a marketplace of...

### Translation, Recommendation and Validation Tools

allow platforms and applications to complete robust job descriptions and postings efficiently, translate between skills and competencies in that package, and validate the output. In order to fill out these job postings, the creators of these tools need machine-readable...

### Data Resources

such as open competency frameworks, which also benefit from a feedback loop from aggregated jobs data. A network of one or more organizations, and optionally tools and data resources, can additionally come together to form a...

### JDX Data Collaborative

Collaboratives pull, aggregate, and enable analysis to provide actionable information back into all the platforms and applications.
